

Microsoft Defender for Office 365

Last updated by | Naser Mohammed | Mar 19, 2023 at 7:18 AM CDT

Microsoft Defender for Office 365 Connector ingests to Sentinel the following 6 alerts as show in the Connector's description:

- A potentially malicious URL click was detected
- Email messages containing malware removed after delivery
- Email messages containing phish URLs removed after delivery
- Email reported by user as malware or phish
- Suspicious email sending patterns detected
- User restricted from sending email

These alerts can be seen by Office customers in the Office Security and Compliance Center.

For the remaining Office Security and Compliance Center alerts to be ingested in the Workspace the customer needs to enable the **Microsoft 365 Defender** connector which operates in a different API pipeline and allows for the ingestion of the remaining alerts.
