# How to find ID

Last updated by | Hekmat Abuzahrah | Mar 30, 2023 at 8:35 AM CDT

When opening an IcM about some issue with a file import, it's always very useful to include the file id, so we can find it in our logs. This page explains how to find a file's id.

1. Go to "manage imports" blade:

2. Open the browser's developer tools (you can do it by pressing F12 in most browsers).

3. Go to the network tab:

Manage file imports

↻ Refresh 🗑 Delete

The system maintains the status of the file import for 30 days. The actual file is maintained in the system for 24 hours. After 24 hours the file is deleted and the ingested indicators will continue to show in the Threat Intelligence menu.

4. Refresh the page using the refresh button:

5. You will see that a single call was sent:

Manage file imports   ✕

⟳ Refresh   🗑 Delete

The system maintains the status of the file import for 30 days. The actual file is maintained in the system for 24 hours. After 24 hours the file is deleted and the ingested indicators will continue to show in the Threat Intelligence menu.

6. click that row and go to "Preview". The response will look like this:

7. you can find the file you're looking for based on its location in the grid. For example, if you want to file the id for the second file in the grid, you would go to index 1, expand it, and you will see the id:
